Based in Toronto • Serving India + International Clients

Architect-Led Visualisation. Built on Design Intelligence.

I am an architect and urban designer with a deep understanding of architectural drawings, detailing, materiality, and spatial intent.
Each visual is developed not merely as a representation, but as a carefully composed communication tool conveying atmosphere, scale, and experiential quality with clarity and accuracy.

What I Offer

I provide photorealistic architectural visualisation supported by precise exterior and interior 3D modelling, tailored for both design development and marketing communication. My work focuses on producing high-resolution stills and carefully composed imagery with rapid, reliable production timelines. I work in direct collaboration with architects, principal designers, and studios, ensuring seamless coordination and accurate interpretation of architectural drawings and design intent without unnecessary back-and-forth.

Why Clients Choose Me

Clients value the clarity and efficiency of an architect-led workflow combined with a strong command of proportion, light, and material behaviour.
I operate with a deadline-driven production mindset, offering single-point accountability with no outsourcing at any stage.
My process is supported by fast, structured revision cycles and a consistent standard of visual quality across all deliverables.

Services Offered

I offer concept and schematic design visualisation supported by accurate 3D modelling developed from CAD drawings, PDFs, and Revit files. My scope includes high-quality exterior and interior renders, aerial visualisations, and optional animation sequences for presentation and marketing use. For clients in India, I also provide physical print-ready outputs and framed presentation graphics when required.

Rendering Process

Each project begins with the receipt of architectural drawings and a defined material palette to establish design intent and visual direction. This is followed by precise 3D modelling and scene development. A first draft is then produced focusing on lighting, composition, and spatial clarity. After incorporating client feedback and markups, the final high-resolution output is delivered, complete with post-production optimisation and professional colour grading to ensure visual consistency and impact.

COMMERCIAL BUILDINGS

Nashik, Pune & Mumbai

This page presents a curated selection of high-density mixed-use and commercial developments located in major metropolitan cities, each developed with distinct architectural concepts and material strategies. My scope of work involved producing multiple lighting scenarios and aerial compositions across different projects, executed through several commercial-stage revision cycles. The visual emphasis remains on accurately communicating urban context, massing relationships, large-scale form, and night-time lighting behaviour across all schemes.

BUNGALOW

Khandala.

- Designed by -
Integrid Design

This page features a curated selection of individually designed residential bungalow projects developed across diverse global locations, each responding to unique site characteristics, spatial requirements, and architectural concepts. Every scheme was approached as a distinct design exercise, with visual narratives shaped by context, material strategy, landscape integration, and natural light. My scope included full exterior and selected interior visualisation, executed through multiple design iterations to support both client presentations and design development.

SCHOOLS

WAI, SATARA

- Designed by -
Integrid Design Consultants.

Both school projects were located in Wai and were designed by the same architect—one developed as a government school and the other as a private institutional project. My scope of work for both included complete exterior visualisation, human-scale perspectives, and campus-level compositions, ensuring each scheme was clearly communicated through accurate massing, proportion, and spatial representation.

INTERIOR

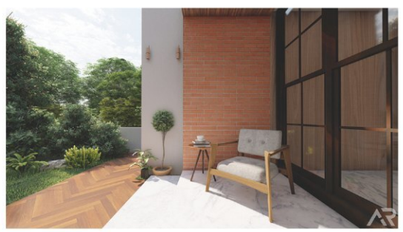

Pune.

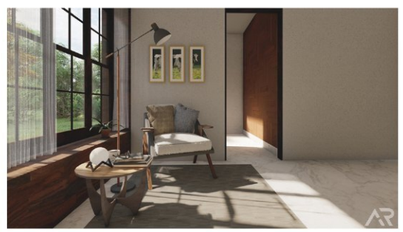

- Designed by -
Alighn Studio.
11°North.

A visualisation we did for Alighn Studio and 11°North.
The sunshine streaming through wide open glass is bringing so much life to the space!
The architects team wanted to feel this space more of modern balancing the minimalism and thus the view ticked all boxes.

PUBLIC PLACES

Mumbai & Pune

This page presents a curated collection of public sector and urban design projects, including community centres, pedestrian and vehicular bridges, and large-scale urban interventions developed across varied contexts. Each project responds to specific civic, infrastructural, and social requirements, with design strategies shaped by accessibility, movement, public realm integration, and long-term durability. My scope of work involved producing comprehensive exterior visualisation, large-scale spatial compositions, and contextual aerial views, supporting design presentation, stakeholder communication, and planning reviews.

Software Expertise

My visualisation workflow is built on a professional-grade toolset optimised for accuracy, efficiency, and high-end visual output. I primarily use SketchUp and Rhino for precise 3D modelling, supported by AutoCAD for technical drawing coordination. Rendering and lighting are executed using Lumion and V-Ray based on project requirements, while Photoshop is employed for advanced post-production, colour grading, and final image refinement. This integrated workflow ensures consistency, speed, and visual precision across every deliverable.

Rendering Rate Card (CAD)

The following rates are structured for studio collaboration, commercial production timelines, and long-term outsourcing partnerships. Final pricing is confirmed upon review of drawings, material palette, scope of views, and delivery schedule.

Basic Exterior Render: $75 – $100 CAD per view
Detailed Exterior Render: $100 – $150 CAD per view
Night Render: +10–15% on base rate
Aerial Render: +20–25% on base rate
Animation: $10 – $15 CAD per second
